Daniel Cornejo

Senior QA Engineer · Manual & Automation

Morelia, Michoacán, Mexico | fdanielcm@gmail.com | +52 443 411 0621 | linkedin.com/in/fdanielcm | github.com/FDCornejo

Summary

Senior QA Engineer with 7+ years in QA (8+ in software) testing web and mobile applications (iOS and Android), combining manual and automated testing. Primary QA on multiple products, owning regression, bug triage, release go/no-go decisions and end-to-end data validation from Salesforce and SQL databases through to the UI. Recently migrated a test suite from Cypress to Playwright (TypeScript) using AI-assisted development with Claude. Has worked exclusively with US clients, collaborating daily in English with developers and Product Owners and presenting sprint and delivery demos in English. Adapts quickly to new teams and complex domains.

Experience

Improving Nearshore Jul 2021 – Present
Remote

QA Engineer (Manual & Automation) · *Client: Enterprise community platform*

Confidential US enterprise community platform built on a shared Salesforce, GraphQL and Google Cloud backend. Assigned as the go-to QA for new initiatives: primary QA on four projects, including a new innovation web app on that backend, the cross-platform member app and an internal Salesforce prospects tool.

- Replaced an inherited, hard-to-maintain Cypress suite with a centralized Page Object framework covering several web apps, with multi-environment config, reusable Firebase Auth sessions and TestRail reporting on every sandbox and staging deployment.
- Established a two-stage regression process (sandbox and staging approvals) as the go/no-go criterion for weekly production releases, and, once branch-protection rules were introduced, acted as the QA gate on pull requests to protected branches.
- Migrated the web module's tests from Cypress to Playwright (TypeScript, Page Object Model) using Claude, covering UI flows and GraphQL API checks; added a GitLab CI job on every merge request and a custom reporter that turns persistent CI failures into AI-ready debugging summaries.
- Served as primary QA for the V2 refactor of a bidirectional Salesforce–PostgreSQL extraction service, validating asynchronous cron timing and hash-based caching by changing Salesforce data and verifying results in SQL.
- Triaged bugs across frontend, backend and mobile (React Native / Expo on iOS and Android) using SQL and GraphQL; stabilized a Maestro mobile login flow and published JUnit E2E results as pull request comments.

Technologies: Playwright, TypeScript, Cypress, GraphQL, SQL, Salesforce, GitLab CI, TestRail, Maestro, Claude

Test Engineer · *Client: Data review & AI platform*

US subscription platform for large-scale information review used by law firms and schools. One of two QA engineers for an acquired machine-learning model training module, through its integration into the client's next-generation platform.

- Shared QA ownership of the integration team with one teammate, organizing and executing test plans and reporting regression results for delivery across multiple teams under SAFe.
- Owned manual regression for model training and document-collection features, validating that model updates from the Data Science team worked end to end in the UI.
- Ran exploratory and negative testing with real document inputs to break model-training flows, catching defects introduced by unannounced model changes.
- Set up TestRail with my teammate to manage the automated suite and track regression across products; ran the suite on every release and helped fix failing tests.
- Supported bug resolution for a third-party platform integration and for legacy products.

Technologies: TestRail, Selenium, Java, SAFe, Scrum

Junior Test Engineer Aug 2019 – Jun 2021
SCIO Consulting · Morelia, Mexico

Software consultancy. Joined as QA Apprentice (Aug–Dec 2019, training program) and was hired as Junior Test Engineer, assigned to four US client projects and two in-house products in small, self-organized Scrum and Kanban teams, presenting sprint demos to clients in English.

- **Client · Higher-ed document management platform:** owned regression for a dashboard application, estimating and running manual and automated cycles; proposed and introduced Cypress into the existing .NET / Selenium (Page Object Model) suite to automate Shadow DOM components Selenium could not reach.
- **Client · NGO mobile app:** first QA project. Static-tested user stories with the Product Owner, designed and documented the full test case suite in Microsoft Test Manager, and ran manual regression on a React Native app (iOS and Android) connecting sponsors with children through their teachers.
- **Client · Equipment-dealer management software:** validated report structure and data against the database with SQL, in a two-person team with the Product Owner and developer.
- **Client · Streaming TV platform:** manual testing and regression for a new feature, working in parallel with the in-house rewards platform (50/50 split between both projects).
- **In-house products:** tested SCIO's rewards platform (web, iOS and Android) and its food-delivery PWA, my first remote project; started automating with Selenium (C#).
- Kept Excel regression matrices for traceability on every project, including a release template I co-designed for the food-delivery PWA.

Technologies: Cypress, Selenium, C#, SQL, Microsoft Test Manager, React Native, Scrum

Front-end Developer (Professional Residency) Jul 2018 – Dec 2018
eXso Consulting · Morelia, Mexico

- Designed and built the front end of an ERP covering warehouse, sales and purchasing processes for a wholesale electrical-parts distributor.
- Co-designed with two developers the code proposal and the inventory UI showing every item and its location, and designed the app's logo and launch materials.

Technologies: Vue.js, Node.js

Education

B.S. in Computer Systems Engineering · Web Technologies specialization 2012 – 2018
Instituto Tecnológico de Morelia

Certifications

- ISTQB Certified Tester Foundation Level (CTFL) – ATSQA, 2023

Skills

Core: Manual & Regression Testing, Test Design (Plans & Cases), Mobile Testing (iOS / Android), Cypress, Playwright (TypeScript), SQL & Data Validation, AI-assisted Testing (Claude), API Testing (GraphQL), Salesforce, Selenium (Java / C#), Scrum & Agile Facilitation
Test Automation: Playwright, Cypress, Selenium WebDriver, Maestro, Page Object Model
QA Practices: Regression Testing, Exploratory Testing, Static Testing, Regression Matrices, Bug Triage, Release Go/No-Go
Programming Languages: TypeScript, JavaScript, Java, C#, SQL
APIs & Data: GraphQL, PostgreSQL, Salesforce, Bruno
Tools & CI: GitLab CI, Git / GitHub, TestRail, Azure Test Plans, Microsoft Test Manager
Methodologies: Scrum, Retro & Daily Facilitation, Kanban, SAFe
Soft Skills: Ownership & Accountability, Adaptability to New Domains, Proactivity & Initiative, Cross-functional Collaboration, Multitasking Across Projects, Clear Communication & Bug Reporting, Client Demos in English

Languages

Spanish – Native; English – Advanced · Professional; French – Intermediate (B1)
